

Copenhagen 20.08.2007

Open position as *software developer (server)* at mobilePeople

mobilePeople is an innovative and exciting international company, in a rapid growth, that includes offices in Copenhagen and sales offices in London, Melbourne and pending establishment in USA.

mobilePeople is in a key position to develop solutions for *Mobile Search* – the next big market related to search engines that offer users the possibility to search for content and services by use of mobile terminals. Our customers include local search engines in the Nordic countries, England, Germany, Holland, Belgium, Portugal, Ireland and Australia.

Our solutions for *Mobile Search* are centered on development of user interfaces, service extensions for mobile phones (Java ME, Windows Mobile, Symbian, mobile browsers etc.) – in close collaboration with our customers.

mobilePeople was established in January 2002 based on our passion for the mobile market and technology. Today we are a team of 40 experienced developers and professional sales staff.

We believe a good company is built on respect. Respect for each other, respect for our work, respect for our customers and respect for their customers. Mobile Peoples goal is not to be the biggest, but to have fun while we become the best.

The job

To strengthen our core server development team, we are offering a position as *software developer* with interest and experience in java server side development. We are searching for people that can work in our R&D department located in Copenhagen.

As *software developer* at mobilePeople we expect that you

- participate in all the parts of software development, specification, design, development, test and release,
- create applications for mobile devices using mobilePeople's Liquid™ framework,
- contribute to mobilePeople's Liquid™ framework,
- adopt new technologies, fast,
- have a soft spot for the mobile market,
- work for food, and
- surprise us with your sense of humor.

We use eclipse as development environment, and use technologies such as Eclipse Modeling Framework, struts, hibernate, spring, maven2, subversion.

Your qualifications

You will have a B.Sc., M.Sc. or equivalent education and experience with system engineering and software design and development. You are self motivated and a team player.

In addition, we expect that you

- are an experienced Java programmer
- love and master object oriented analysis and design, including knowledge of UML
- know how to document you work
- have experience and understanding with XML
